

CHANGING THE STATUS QUO:

Athletes. Pilots. Doctors. All have to perform at the top of their game. Pressure mounts, adrenaline rushes. Heart rates go up, senses are heightened. If athletes crack under pressure, they lose the game. If pilots or doctors don't come through in the clutch, people die. Pilots have well-accepted systems of checklists and systems to follow when faced with an emergency. Doctors are expected to remember years of training and 50+ complex steps to help save a patient facing cardiac arrest.

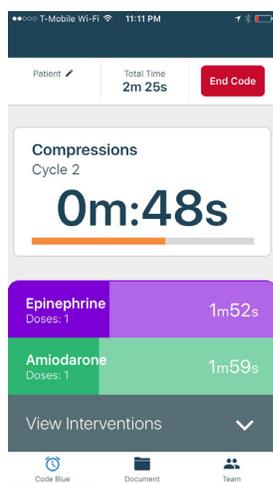

Medical emergencies can be the most stressful, anxiety-provoking events for health care providers, often leading to feelings of doubt, uncertainty and remorse. Doctors, nurses and EMS providers deserve better support. As fellow clinicians, the time to change the status quo is now.

THE PROBLEM:

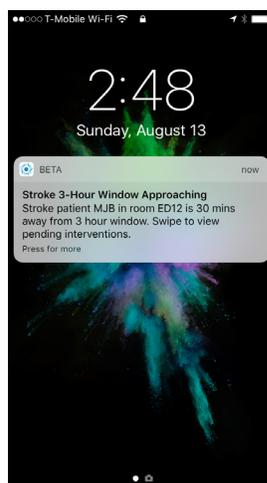

Each year, 250,000 people die in the U.S. because of preventable medical errors. We believe that patients deserve safe and effective care while health care providers deserve better support to treat life-threatening events such as **cardiac arrest, stroke, sepsis, and heart attack.**

THE SOLUTION:

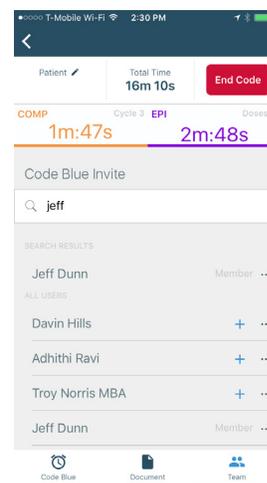

Redivus Health is a physician-founded software company whose mission is to save lives and prevent medical errors through next-generation clinical decision support. Enabled by mobile technology and cloud-based services, we offer providers evidence-based guidance with the goal of 100% compliance and documentation accuracy. Redivus offers a comprehensive, purpose-built solution to support clinicians and empower them to make the best decisions during medical emergencies. Our solution simplifies the complex nature of medicine by intelligently automating nationally accepted guidelines, allowing providers to make the right decision faster.

Code Blue animation and warnings for compressions, epinephrine and amiodarone

In-app alert or out of app notification for new events and warnings

Adding team members to view moment by moment event documentation

COMPETITIVE ADVANTAGE:

We've differentiated our platform from the alternatives by creating a purpose-built solution that clinicians want to use and that fits within their workflow. We've packaged together capabilities including clinical guidance, task management, timers, notifications, EMR integration, analytics, clinical insights, and HIPAA-compliant security. Our product is an end-to-end solution focused on solving the key problems with delivering emergency care. No other solution can provide this today.

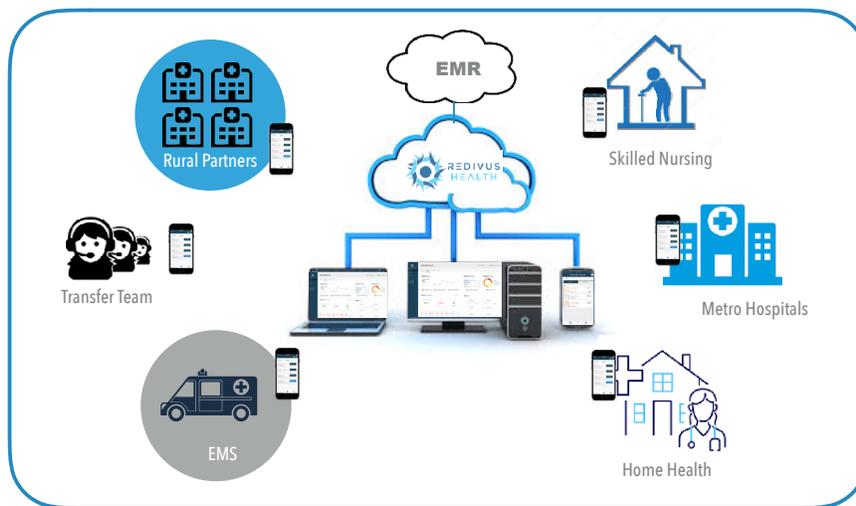

Our key competitors are EMR systems (e.g. Cerner, Epic) and traditional clinical decision support (CDS) tools (e.g. Up-to-Date, Epocrates). EMR solutions are notoriously unpopular with clinicians because the user interface is poorly designed. Most EMRs do not have point-of-care solutions that support clinical guidance and generate the value that we do. Traditional CDS tools are bulky reference tools that aren't effective in guiding clinicians when seconds matter.

THE RIGHT DECISION:

Redivus Health focuses on providing clinical decision support for the most time-critical and life-threatening medical emergencies: **cardiac arrest, stroke, sepsis and heart attack.**

We provide the right guidance, at the right time, on any device. Our user interface is easy to use and quick to learn. We reduce complexity and variability in diagnosis and treatment. We automate and time-stamp documentation for the patient record and sync it with the EMR. We work to customize our solution so it fits seamlessly into the existing workflow. And we make it simple to coordinate patient care across facilities and teams.
