Even in Challenging Times, Hospitals Still Making an Impact on Kansas Economies

(January 25, 2022) – Hospitals and health care systems are a powerful economic force in Kansas, even in these challenging times. The state’s health care sector continues to generate billions in income and sales, ranking it fifth among all economic sectors in the state. Hospitals were the biggest contributor in the health sector, generating $9 billion in income and $18 billion in sales. Although, there was a slight decline in health care employment in 2020, both in Kansas and nationally, Kansas hospitals still employ nearly 100,000 of the 240,000 health service employees in the state. The health care sector is the third largest aggregate employer in the state.

These are just a few of the findings in the January 2022 report, The Importance of the Health Care Sector to the Kansas Economy, which details estimates of the “gross” impact of the health care sector on economic activity in the State of Kansas. In the report, K-State Research and Extension identified three primary ways health care influences local economic development: health care attracts and retains business, attracts and retains retirees, and creates local jobs.

Jobs are an essential part of the economic impact; however, funds also flow to businesses and throughout the economy as hospitals purchase goods and services. Hospitals generate nearly $4 billion in local retail sales in Kansas each year. Additionally, the hospital sector generates more than $262 million in state sales tax. These are critical funds that the state uses for important programs such as education and transportation.

“Hospitals and health services truly are an economic anchor in our state,” said Chad Austin, president and CEO of the Kansas Hospital Association. “This report documents the importance of the health care sector to the Kansas economy. While the estimates of economic impact are substantial, they are only a partial accounting of the benefits health care in general, and community hospitals in particular, provide to the state.”

According to the 2022 economic report, Kansas hospitals employ five percent of all job holders in the state. The report calculated economic multipliers, or “ripple effects,” and estimated hospitals account for 94,035 additional jobs throughout all other businesses and industries in the state. In other words, for each new job in the hospital sector,
nearly another job (0.95) was created in other businesses and industries in Kansas. The hospital sector employment had a total impact on state employment of 192,578 jobs.

Furthermore, the entire health sector in Kansas employs nearly 240,000 people, or 12 percent of all job holders in the state. This puts Kansas ahead of the national average, which is 10 percent of job holders in the United States working in health care services. The total employment impact of the health services sector in Kansas is nearly 407,000 jobs. This report confirms health care is directly or closely related to more than 20 percent of all Kansas employment.

The study also found Kansas hospitals generate more than $7.5 billion in direct labor income to the Kansas economy each year. For every dollar of income generated in the hospital sector, another $0.63 was generated in other business and industry. As a result, the hospital sector had an estimated total impact on income throughout all businesses and industries of $12.3 billion.
