Scenarios of the Future

Introduction

The attached scenarios of the future have been developed by the Kansas Hospital Association Rural Health Visioning Technical Advisory Group. They have been developed to provide hospitals with a discussion tool about the future of health delivery in Kansas.

There are many different ways to speculate about the future. The attached are the options that the RHV TAG thought seemed most likely to happen in the next five years.

Try to focus your discussions on what you would do **IF** the scenario happened instead of debating the likelihood of it happening.

We welcome feedback on the usefulness of this tool and suggested improvements. Comments can be sent to jfindley@kha-net.org.
