Cybersecurity remains a priority for healthcare organizations as hospitals and health systems work to protect patient information, maintain clinical operations and support safe, uninterrupted care. Threats such as ransomware, phishing attacks and vulnerabilities in connected devices can impact daily operations and place sensitive data at risk.

Join the Kansas Hospital Association for a Noon Briefing featuring Chris Swartz, Solutions Architect II, ISG Technology on Wednesday, June 10, from Noon – 1 p.m.. Where Swartz will explore practical cybersecurity risk mitigation strategies healthcare organizations can implement, including multi-factor authentication, endpoint protection, network segmentation, employee education and secure backup practices. The webinar will also discuss how managed services providers (MSPs) can support healthcare organizations through services such as system monitoring, patch management and incident response.
