## Cybersecurity and Retirement Plans: Protecting Yourself Against AI Threats

**August 13, 2026**

Noon - 1:00 p.m.

**[Click Here to Register](#)**

Cybersecurity threats evolve at a relentless pace. Both the U.S. Department of Labor and Securities and Exchange Commission encourage plan sponsors, advisors and individuals to take a proactive role in protecting data, identities and assets. Organizations must adapt quickly to reduce risks. Today, AI adds both new challenges and opportunities—attackers use AI to automate threats, while defenders apply it to detect anomalies and strengthen response. Understanding these dynamics can help your organization build a stronger cybersecurity program to prevent breaches and fraud.

Presenter Kyle Jekot, senior cybersecurity communication director, delivers high-level security and technology presentations on the Empower cybersecurity program and related technology advancements to prospective, new and existing clients as well as Empower associates, including members of the executive leadership team.

Jekot currently maintains the Certified Information Systems Security Professional through the International Information Systems Security Certification Consortium, the Certified Fraud Examiner from the Association of Certified Fraud Examiners, the GIAC Certified Incident Handler and GIAC Security Leadership Certification from the Global Information Assurance Certification organization.
